GovCMS compliance classifications

The table below maps required functionality against GovCMS classifications (e.g. out-of-the-box, custom theme, etc.) and then notates the level of compliance. Salsa Digital uses this table when assessing GovCMS' viability.

Classification	Compliance level	Suggested complexity	Description
Out-of-the-box — tick and flick	High	Low	Functionality available by simply 'enabling' the feature or function with no (or low) configuration required.
Out of the box — basic config	High	Low	Functionality achieved with basic configuration using GovCMS distribution's Drupal core capabilities.
Out-of-the-box — moderate config	High	Med	Functionality achieved with moderate level of configuration using 'GovCMS certified' third-party contrib modules.
Out-of-the-box — high config	Med	Med	Functionality achieved with moderate level of configuration using 'GovCMS certified' third-party contrib modules.
Theme level code required	Med	High	The functionality can be achieved within GovCMS using code available in the theme layer of Drupal.
3rd party module required	Low	Med	Functionality possible however requires a third-party contrib module to be reviewed and approved for inclusion by the GovCMS team.
Highly custom	Low	High	Functionality is highly complex and requires heavy customisation not possible (or prohibitive) with the GovCMS platform.
Roadmap			
Not applicable	N/A	N/A	Not a functional requirement.
Not supported	Not Compliant	Extreme	Not possible (or prohibitive) with the govCMS platform, would require community change platform.
